

Sustainable Products Definition Plastic

The purpose of this document is to be a support when we are about to select the products that we define as sustainable products within **Plastic**.

To offer our customer a sustainable product is important from both an environmental- and a business perspective. We base our definition on three important aspects:

- Economy - encourage businesses to make investments that hinders longer growth without harming the environment or society.
- Society - encourage companies to improve by complying with human rights and environmental laws.
- Environment - encourage companies to manage our natural resources correctly and minimize environmental impact.

Sustainable products provide environmental, social, and economic benefits throughout the life cycle.

Below you find our definition of a sustainable product within Plastic.

General definition

Under the new plans, all plastic packaging on the EU market will be recyclable by 2030, the consumption of single-use plastics will be reduced and the intentional use of microplastics will be restricted.

Boxon's definition

To be defined as a sustainable product we require that:

- The product should be produced with a minimum of 50% recycled material
- The product should be produced from bio-based raw material such as tall oil or sugar cane base.
